RIVERx RESCUE BOARD

The new generation in small, swift water rescue and recreational flotation devices, the RIVERx board features improves function, durability and affordability over other existing products used today. Attributes include rotomolded, superlinear polyethylene shell (like kayaks), drain/vent plug, dished deck, forearm elbow wells, 3/8" thick deck cushion, sturdy flexible handgrips for multiple persons or for body positioning, and holes for rope use in performing ferry angles and ice rescues. Additionally, the sled length has been increased in order to provide extra flotation and torso to mid-thigh rock and debris protection, not available in traditional bodyboards. Not featured in any other swift water rescue or recreational river board (hydrospeed or sledge) on the market, are the deep channels and reverse chines. These are important features which enable the rider to direct and carve turns. Without them, the rider cannot adequately maneuver the board where he/she wants it to go, and a great deal of side skipping is experienced. The RIVERx is a very secure platform to ride on, even while wearing a bulky pfd.

Dimensions and Weight: 55" x 24" x 6" at thickest point, 18lbs

Materials: Rotomolded Polyethylene - Hollow Core with vent/drain plug (Same durable material used in plastic Kayaks!)

Color: Yellow with Red Hand Grips and Black 3/8" thick comfortable pvc deck padding. This is an advancement in technology and function over existing products such as the RAD or BZ River Rescue Boards and the Carlson Board.

(Not to be trailered or attached to a pwc!)

Uses:

River flotation and personal protection from debris-

River Rescue and Recreational Riding, River Luge, Sledging and Hydrospeeding, in Rapids

Ferry Angles/Tensioned Diagonals

Tyrolian Traverse

Swift Water Rescue

Ice Rescue

New for 2010... Removable HDPE Ice Rails
